

GUNSMITHING THE AR-15: BUILDING THE PERFORMANCE AR

Master gunsmith and author Patrick Sweeney guides readers through more than a dozen projects that squeeze every ounce of performance out of an AR-15. Furthermore, Sweeney demystifies the large and often daunting accessory choices available today and educates shooters on what upgrades perform the best for specific ARs.

Best of all, he breaks down upgrading an AR into a simple-to-follow, step-by-step process readers can complete in their own home with minimal tools. It's no fuss gunsmithing that leaves shooters with a souped-up, hot-rod of a gun.

Learn To Customize Your AR-15:

- **Competition:** Learn what parts meet specifications and will help shooters outperform the competition
- **Hunting:** Customize an AR for anything from predators to big game
- **Self-Defense:** Understand the best setup for defense, and which modifications are unnecessary or even ill-advised
- **Retro:** Learn to recreate historically accurate models
